

Here is help/resources for installing and using MySQL:

- For the most part, installing the database, is quite simple and is basically about downloading and running the installer:

<https://dev.mysql.com/downloads/windows/installer/>

Once you run the installer, it allows you to set your username and password.

- Then you can download JDBC:

<https://dev.mysql.com/downloads/connector/j/8.0.html>

- From there, you can include JDBC in your project. Here is a video which provides step-by-step instructions of this:
